PREVENT DRYER FIRES

**NORTH AMERICA HAS
MORE THAN 15,000
DRYER FIRES A YEAR!**

LintAlert® DRYER SAFETY ALARM

- Detects exhaust problems before there is a danger
- Helps prevent dryer fires
- Indicates when it is time for preventative maintenance
- Helps save energy by ensuring proper venting
- Reduces drying time
- Reduces excessive wear to clothing
- Lengthens appliance life
- Features an outlet saving pass-through plug
- Quick and easy installation

*Source: US Fire Administration

Every Day More than 50 Dryers Catch Fire in North America

Lint makes it past the filter and collects in every dryer's exhaust system. The result: longer drying times that waste energy and wear out clothes. Most importantly, exhaust problems also create a very real fire danger. Today, you can help save energy and improve your home's safety.

So Simple, So Advanced!

The LintAlert® features an innovative and responsive digital pressure sensor that takes the guesswork out of maintaining your dryer exhaust. With LintAlert® your home is safer and your dryer and clothes last longer.

Alarm Speaker:

Alarm sound can be muted with test button below.

Test Button:

Used initially to calibrate your specific dryers' pressure levels and also mutes the alarm.

SmartTap Fitting™:

Connects to dryer exhaust hose to detect pressure changes caused by lint build up or other obstructions.

Easy Installation:

- Clean the lint trap.
- Clean the dryer exhaust hose on the back of the dryer.
- Attach the TAP fitting and plastic tubing to the dryer hose.
- Connect the tubing to the Lint Alert module.
- Plug the unit into a 110V outlet and calibrate (12 seconds).
- That's it!

Visual Alert:

Ready or Stand-By mode is illuminated in blue and is bright enough to provide a soft night-light effect. The blue LED's will flash when the alarm is activated.

Blockage Indicator:

Displays what level of pressure exists in the dryers' exhaust conduit. Green, yellow, and red LED indicators.

Hose & Hose Connector:

Connects alarm module to "SmartTap™" fitting on the dryers' exhaust hose by way of 2 meter (6") clear tube (included).

Pass Through Outlet:

Provides a convenient outlet for an iron, washing machine or other electrical equipment using up to a maximum of 15 amps.

LintAlert® Protection

The LintAlert® should be added as part of every home safety plan, which includes smoke and carbon monoxide detectors and fire extinguishers.

The Lint Alert is easy and quick to install. It attaches to your dryer's exhaust hose (on the back of the machine). The LintAlert® measures the pressure changes that occur as the dryer is used. As lint naturally builds up over time or as a result of any other blockage in the vent or the exhaust exit point, LED indicators progressively illuminate to show how efficiently the dryer is exhausting. If airflow restriction becomes dangerous, an audio / visual alarm is triggered to let you know that the dryer needs attention.
